

Sean Penney  
Homework 3

Users search for Bluetooth modules by typing the module name in and hitting submit. The PHP receives the module name via POST and queries the database to get all information about the module with that name. The PHP sends back JSON data, which is used to populate the table.

### Bluetooth Hardware Control Environment

Module Name	GitHub Link	Module Functionality	Tag	Rating
BLE	<a href="#">Link</a>	BLE control of Arduino	BLE URT	10

Enter Module Name:

Submit
